Explanation of Merino Production Indexes

The Merino Production (MP & MP+) indexes rank animals on their ability to produce progeny for a fine wool operation that has significant surplus sheep sales.

The index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing merino flocks who do not keep their wethers to produce wool.

What would I get from using this index?

After ten years of using either the base or plus index you would be likely to get the following gains in production:

MP index Trait	Likely Response	Contribution to economic gain (%)
Fleece Weight	+8.3%	17%
Fibre diameter	-1.1 μ m	22%
Body Weight	+8.2kg	44%
CV of FD	-1.2%	17%

Current national ASBV averages for the traits that I have listed in our catalogue
